TP132B® Pigment Remover

Removing pigments and dyes has never been safer

Excellent hygiene is paramount to produce high-quality products when using pigments and dyes in various plastics industries.

Ecotec Products has extensive experience in developing and producing sustainable cleaning products that are not harmful to humans and the environment. We understand that industries require to meet increasing stringent sustainability goals. That calls for specialist solutions.

We maintain good relationships with various plastic masterbatch producers to ensure that we have first-hand knowledge of what is needed. In keeping updated about enforced restrictions and industry requirements, Ecotec Products helps taking care of your cleaning concerns wherever you are located in the world. Consider us your silent, innovative, and supporting partner, allowing you to focus on your final product.

Ecotec Products has developed a water-based cleaning product that meets the highest requirements in terms of safety for humans and the environment to remove pigments and dyes efficiently. With a unique composition, Ecotec Products offers TP132B® with very high penetration and solving capacity. The product is excellently biodegradable, in accordance with the OECD 301B directive.

TP132B® Pigment Remover

Complete cleaning of pigment mixers and related equipment without residues

TP132B® is a ready-to-use product for cleaning and removing pigments and dyes in mixing equipment for the color plastics industry.

As a liquid, water-based cleaning product, TP132B® cleaning residue can be treated as biological wastewater.

TP132B® is suitable for most types of plastics, including ABS, PA, PC, PET, PS, PMMA, SAN, PE, PP, and PU.

TP132B® is virtually odorless, does not release any fumes, and is not flammable. This makes the product safer and pleasant to use.

We guarantee excellent quality and an economical product. TP132B® offers a more stable production process.

TP132B® is available in IBCs, cans, and drums.

With its high-penetration power, TP132B® allows for thorough rinsing after use, removing any residues. This results in a quick cleaning process.

Unlike many conventional products, TP132B® does not contain any harmful solvents, making it harmless to humans or the environment.

- The ultimate replacement for solvent products
- Very safe to use
- Water-based formulated product
- No harmful fumes
- No hazard symbol according to ED Directives
- Biodegradable surfactants
- Suitable for all surfaces, including non-ferrous surfaces

TP132B® Pigment Remover

How to use it

1. Remove excessive product residue from the equipment with a brush or rinse with water. Apply the product with a low-pressure sprayer, covering all areas.
2. Allow a few minutes to set, depending on the pigmentation type and the degree of the residue to be removed.
3. Rinse with plenty of water under high pressure. Warm water is recommended.
4. If applied correctly, there should not be any residues left.

Please contact us by phone or e-mail if you have any questions or if you require technical support.
